

# CityHelp-GSM

## Standalone emergency call system by GSM

- **Stand alone emergency call box over GSM.**
- You can have CityHELP-GSM with one or two call-groups; apparatuses with two call-groups are more user-friendly for disabled people.
- **Easy to install.** It does not require a dedicated network, it needs only a GSM phone connection.
- CityHELP-GSM plays help-messages that make it more user-friendly
- **On request you can have the power supply by solar cells**
- The emergency call box checks the microphone and the loudspeaker continuously; when it detects a fault it transmits an alarm.
- CityHELP-GSM is a stand alone apparatus (no PC based); the hardware and the software are designed for this application specifically and, consequently, it warrants very high reliability.
